

Customer Experience: Service station

SITE:

ABC Masuuni
Karkkila

PROBLEM:

A filling and service station is daily visited by hundreds of people, whose customer experience is highly affected by the condition of sanitary spaces. ABC-chain wants to stand out by always having clean and odourless toilets for their customers. Due to large number of daily visitors, it is challenging to maintain high level of hygiene.

SOLUTION:

Customer toilets were treated with the catalytic coating and blue WiSDOM AiR LiNE photon disinfection luminaires were installed in the ceiling. Efficient disinfection is performed during night time, when blue lights are automatically activated with a timer switch after the station is closed. LED Tailor's harmless photon disinfection system destroys microbes and unpleasant odours from the premises.

BENEFITS:

"Toilets have stayed odourless and this kind of chemical-free system fits our company values well. We are happy for being able to provide our customers with pleasant and safe sanitary spaces every day."

- Service Station Manager, ABC Masuuni
